STG - (A) United States patent
AB - A method for mounting safety shields onto eyeglass temples and a
kit for carrying out that method. A temple of an eyeglass frame is
placed in a channel forming part of a side shield thereafter, a
pin is inserted into an opening formed in the side shield to
create a force fit between the temple, the channel and the pin
which attaches the side shield to the temple. The side shield is
placed in its operative position before the pin is inserted into
the opening and the force fit resulting from the insertion of the
pin into the opening holds the side shield in its operative
position. The kit includes a side shield having a longitudinally
extending channel into which a longitudinally extending eyeglass
temple may be inserted. The channel has an open lateral end
through which the temple may be inserted and a supporting lateral
end against which the temple may be supported. The side shield
further includes an opening extending transversely to both the
longitudinal direction and the supporting lateral wall. A pin is
adapted to be inserted into the opening so as to force the temple
against the supporting end of the channel to create a force fit
between the side shield and the temple when the temple is located
in the channel. A member having a slot formed therein is affixed
to the temple to receive the pin and prevent the temple from
moving longitudinally within the channel of the side shield.
